
TIDE-style oracle: each bar is AP50 gained (IoU 0.5, kitti_test, 3769 images) when only that error type is fixed, one oracle at a time; bigger = that error costs more. Loc = box overlaps a same-class object at IoU 0.1-0.5; Missed = ground truth never matched. Headline runs only (YOLO11m @1280 and YOLO26m (NMS) variants are in table T8). Closed-set models use the Cyclist merge; open-vocabulary models prompt Cyclist directly. AP50 here uses COCO-style 101-point interpolation and is not comparable to the KITTI leaderboard.
