
Recall = share of ground-truth boxes matched at IoU 0.5 by a detection of the right class, any score, at most 100 detections per image and class. n = ground-truth boxes in the bin (identical for every model). Occlusion 3 is KITTI's 'unknown'. Dashed = second model of a family. Cyclist is the person+bicycle union box for closed-set models; the smallest cyclist height bin holds only 81 boxes, so that point is noisy. KITTI mAP is COCO-style mAP@[.5:.95] over the 5 mapped classes (car, truck, pedestrian, cyclist, tram); COCO mAP is over 80 classes.
