
Each bar = mAP(variant) - mAP(headline) for one model; negative means the variant scores lower. Headline = Van merged into Car, Cyclist = person+bicycle union box (closed-set) or prompted cyclist (open-vocab), score threshold 0.001 (0 for DETR). KITTI ablations were not run for OWLv2 / Grounding DINO-T (marked n/a); their Cyclist is already prompted. KITTI mAP is COCO-style mAP@[.5:.95] over the 5 mapped classes (car, truck, pedestrian, cyclist, tram); COCO mAP is over 80 classes. OWLv2 and Grounding DINO-T COCO numbers are on a seeded 1000-image val2017 subset (the others use all 5000).
